

10007055-1

Amendment

2

Amendments to the Specification:

Please amend paragraph 0035 to read:

[0035] The first step in adjusting the L*a*b* data is to replace the "a" and "b" data points for each pixel of all the original data, step 501, using the benchmark data, e.g., median values. This will set a uniform background color sepia hue for the entire image.
